

# LHC electron cloud studies - work plan

Kevin Li

November 26, 2010

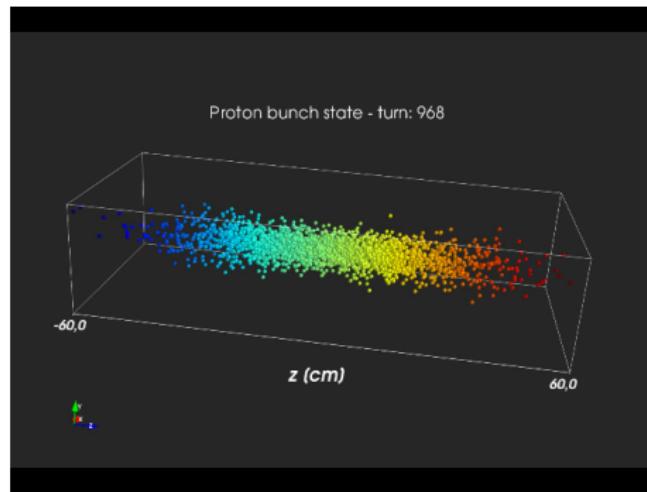

# Proposed studies

- ➊ Energies: [0.45, 4, 7] TeV
- ➋ Reproduce Elena's studies for 0.45 TeV:
  - Scan over ecloud density:  $[2, 4, 6, 8, 10] \cdot 10^{11} \text{ m}^{-3}$
  - Scan over intensity:  $[0 : 1.1] \cdot 10^{11}$
  - Scan over chromaticities: [2, 10, 15, 20, 25, 30, 40]
  - Fast instabilities threshold and rise times
  - Tune footprint analysis → coherent and incoherent tune shift
- ➌ Repeat for other energies/settings

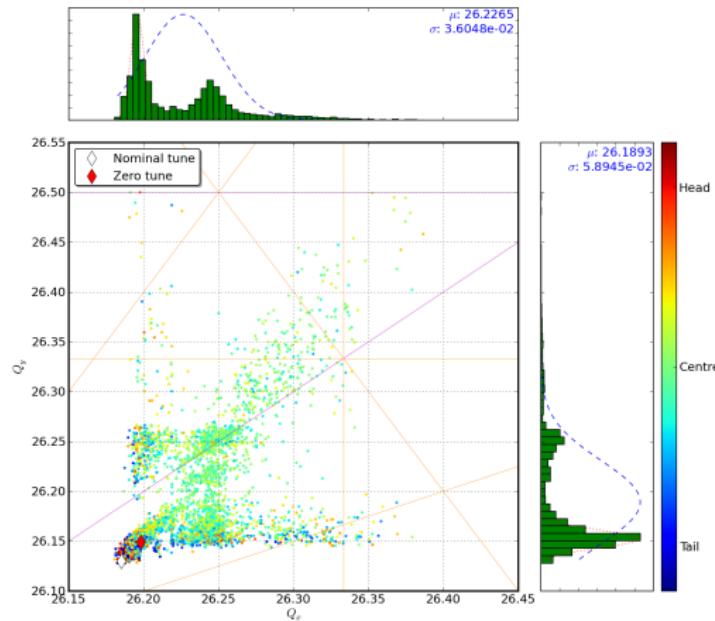

# Examples tune footprint analysis

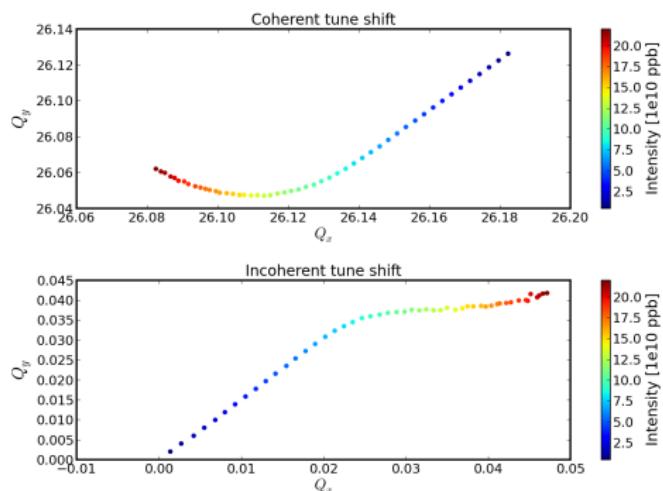

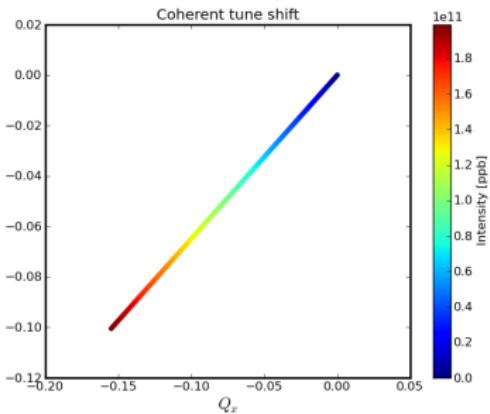

# Examples tune footprint analysis

Electron cloud 2D dynamics - Electrons:  $1.00\text{e+}12/\text{m}^3$ , Protons:  $1.32\text{e+}11$

# Examples tune footprint analysis

$$\Delta Q_u = \frac{N r_p R}{2\pi B Q_u \beta^2 \gamma^3 \sigma_u (\sigma_x + \sigma_y)}$$

$$r_p \approx 1.53500675753e - 18m$$

$$B = \frac{\sqrt{2\pi} \sigma_z}{2\pi R}$$
